PROFESSIONAL SUMMARY

Computer Science graduate (Integrated M.Tech, VIT) with hands-on experience across backend development, applied machine learning, and cloud automation. Skilled in Java, Python, Spring Boot, and NLP/ML, with a track record of shipping full, working projects end to end.

EDUCATION

Master of Technology in Computer Science and Engineering (Integrated) 2021 – 2026

Vellore Institute of Technology | CGPA: 8.50

Class XII – CBSE Board 2021

Percentage: 89%

Class X – ICSE Board 2019

Percentage: 89%

EXPERIENCE

Software Engineering Intern — Virtusa Aug 2025 – Jun 2026

- Developed and tested RESTful APIs using Java and Spring Boot for backend integration
- Built frontend features using Flutter and integrated them with backend services
- Assisted in API integration work to ensure seamless data flow across application modules

Cloud Practitioner Intern — Microsoft E-Train Jun 2024 – Aug 2024

- Designed automated workflows using Power Automate and Azure Logic Apps

PROJECTS

InfluencerIQ – Multi-Platform Influencer Intelligence Platform

Python, Streamlit, Pandas, NumPy, NLP, YouTube Data API, Reddit API, SQLite

- Built a multi-platform influencer analytics tool pulling creator and post data from the YouTube Data API and Reddit's public API, with a CSV-based ingestion path for Instagram in place of unreliable scraping
- Designed a composite Influencer Intelligence Score from engagement-quality, authenticity-risk, and NLP-based niche analysis, plus a platform-confidence metric that flags whether a score rests on live or sample data
- Shipped an interactive Streamlit dashboard with single- and side-by-side creator comparisons, plus automated CSV/PDF report generation

Quantum Supply Chain Manager

Python, PennyLane, Qiskit, QAOA, VQE

- Built a hybrid quantum-classical system for product backorder prediction using Quantum Neural Networks
- Implemented MERA-based quantum models and benchmarked accuracy/performance against classical ML approaches
- Solved Vehicle Routing Problems using QAOA/VQE-based quantum optimization techniques

eSociety – Society Management Platform

Flutter, Dart, Java, Spring Boot, MongoDB

- Built the Flutter front end for a society management platform and integrated it with a team-built Spring Boot/MongoDB backend covering dues, payments, and complaints
- Implemented REST API integration, JSON data mapping, and UI state updates to keep the app in sync with backend changes
- Contributed to digitizing manual, paper-based society record-keeping into a searchable, role-based system

TECHNICAL SKILLS

- Languages: Java, Python, SQL, JavaScript, TypeScript, C++, Rust
- Frameworks & Libraries: Spring Boot, Angular, Flutter, Streamlit, React, Tauri
- AI / ML: Machine Learning fundamentals, NLP, Neural Networks, Computer Vision (PyTorch, torchvision, OpenCV), Quantum Machine Learning (academic)
- Databases: MongoDB, MySQL, SQLite
- Cloud & Automation: Microsoft Azure, Power Automate, Azure Logic Apps, Docker (basic)
- Tools & Platforms: Git, Google Colab, WebSockets

CERTIFICATIONS

- Microsoft Azure AI Fundamentals (AI-900) – Microsoft, 2024
- React.js Developer Assessment – 2025
- AWS Certified Solutions Architect – Associate (In Progress)
